Education

Software Engineering

FPT University HCM Campus

2021 – 2025

Graduated – 3.0 GPA

Languages

English (Proficient)

IELTS 7.5

Japanese (Basic)

Experience

04/2026 – 06/2026 React Native Developer (Fresher)

Cigro

- Collaborated in an **international environment with Korean & Indonesian teams**
- Developed & deployed mobile code (TypeScript, React.js, React Native JSX, Jest Testing) in production environment (**expo apk, app store updates & OTA releases**)
- Sped up development process through **AI usage by optimizing prompts (Cursor Code, Claude Opus, Gemini)**

10/2025 – 03/2026 .NET Back-end Fresher

Unit Corp

- **Implemented Clean Architecture** principles to decouple core banking business logic from external frameworks,
- **Developed and integrated custom ASP.NET Core Middlewares** to handle cross-cutting concerns such as global exception handling, request/response logging, and security header enforcement
- **Developed automated tasks** by configuring background jobs with the **Quartz.NET** & Redis utilizing **Cron expressions** for high-precision scheduling of emails and report generation
- **Optimized API performance** by leveraging Dependency Injection (DI) and asynchronous programming
- **Implemented small, automated tests** using **xUnit** to collaborate with Tester team.
- Gained hands-on experience with **OOP principles and design patterns**, **Docker** and **Microsoft Azure**.
- Assisted in deploying **database commands** on **Linux WPS servers**.

08/2024 – 12/2024 .NET Intern

FPT Software HCM

- Worked effectively in **agile** team environments to resolve technical challenges and meet projects deadline
- Learned & developed proficiency in **corporate & formal** work culture and **structured workflow** environmen

Skills

Programming language

- **Proficient in C#, WPF Forms, .NET Framework, .NET Core, Entity Framework, LINQ, RESTful API, and SQL Server.**
- **Good Java, C**
- **Good HTML, CSS, JavaScript & Typescript**
- **Decent knowledge of microservices, rate limiting, caching, load balancing, SQL indexes.**
- **Comprehensive** understanding and usage of **version control (Git).**
- **Good** understanding of OOP, design patterns, data structures and algorithms.
- **Proficient** at applying AI tools (**ChatGPT, Claude 4.0, Gemini**) in improving code design & coding productivity
- **Good** understanding and usage of **Linux CMD**

Framework

.NET, ABP.IO, Spring Boot, React, React Native
Unity, Unreal Engine

SOFT SKILLS

- Excellent **problem-solving skills**
- Excellent **multi-tasking, team-work & observation** skills
- Curious and passionate, **quick learner with adaptability to new tools and concepts**
- Adaptable & willingness to **work under stress and/or troublesome teamwork situations**
- Strong **logical and analytical thinking**
- Effective **communication and teamwork abilities**
- Good foundation in **software engineering practices (Agile)**
- Awareness and quick adaptability of emerging software trends & solutions, especially news in **coding frameworks, AI models and overall industrial-wide changes in Software Engineering space**

PROJECTS

AVATAR TOUR SYSTEM BACK-END (GROUP PROJECT)

- **Project Overview:** Development and maintenance of an Zalo Mini-App project that grants tour vouchers and discount for solo experiences.
- **Technical Implementation:**
 - Applied OOP principles
 - Integrated 3-Layer Architecture, Entity Framework, JWT Authentication
 - Personally applied VNPay Sandbox payment integration, Generic Repositories and Unit of Work pattern.
 - Configured and maintained Linux VPS server
 - Implemented GitHub Actions pipeline for simple CI/CD
 - Implemented Docker for microservices with 3 containers.
 - Set up Nginx reverse proxy with HTTPS/HTTP2/SSL security
 - Administered SQL Server database in production environment

AVATAR TOUR SYSTEM (MOBILE APP)

- **Project Overview:** Developed a comprehensive React Native Expo application for a tourism company that validates and manages tourist bookings. The application served as a mobile interface for tour operators and administrators to verify reservations, check-in guests, and manage booking details.
- **Key features:**
 - Login functions for staff accounts on mobile platform,
 - QR code scanning functionality for rapid booking validation on the retailer/staff side
 - Real-time booking status updates synced with central database
 - Comprehensive booking details view with customer information
 - Filtering and search capabilities for managing multiple bookings & ticket history

- **Technical implementation:**
 - Built with React Native and Expo framework for cross-platform compatibility (iOS and Android)
 - Implemented RESTful API integration to communicate with the company's booking backend system
 - Implemented JWT-based authentication for secure user sessions
 - Utilized Redux for state management across the application
 - Implemented custom hooks for API data fetching and caching
 - Integrated with cross-platform device camera for QR/barcode scanning based on online library import

HOME PHARMACY MANAGEMENT

- **Project Overview:** A comprehensive **ASP.NET Core 8 MVC** web application designed for pharmaceutical operations management, featuring real-time inventory tracking, prescription management, sales processing, and automated reporting with scheduled Excel exports
- **Key features:**
 - **Complete CRUD Operations:** Patient, medicine, prescription, and sales management with real-time validation and data filtering
 - **Advanced Search & Pagination:** Multi-criteria filtering with server-side pagination (10 items per page) across all modules
 - **Automated Excel Reporting:** Scheduled daily exports (10 PM) with dual-sheet reports (sales list and daily summary)
 - **Export Management System:** File browsing, download, manual cleanup, and automatic retention-based deletion
 - **Quartz.NET Job Scheduler:** Background job processing with persistent storage and manual trigger capabilities
- **Technical implementation:**
 - **Architecture:** .NET Core 8.0 MVC with separate class library for job scheduling, implementing dependency injection via interfaces
 - **Database:** SQL Server with Entity Framework Core 8.0 using Code-First migrations, dual-database setup (main application + Quartz job store)
 - **Validation:** Data annotations on models with server-side validation, comprehensive try-catch blocks in service layer for error handling
 - **Excel Generation:** ClosedXML library for dynamic report generation
 - **Job Scheduling:** Quartz .NET with SQL Server persistence, cron-based scheduling, and configurable retention policies

Certificates

User Experience Research and Design

Online Coursera Specialization, The University of Michigan

Computer Communications

Online Coursera Specialization, University of Colorado System

Software Development Lifecycle

Online Coursera Specialization, University of Minnesota

CertNexus Certified Ethical Emerging Technologist

Online Coursera Specialization, CertNexus

Other skills & Interests

- Computer software savvy (proficient in Windows Offices & Apps, Linux shell commands).
- Strong technical background (manually assembling & customizing PC systems and personal laptops). Passionate gamer
